

ABSTRACT

It is an object of the invention to provide a separation method of an adherend capable of easily and reliably separating
5 an adherend stuck using an adhesive, a method for recovering an electronic part from an electronic part laminate, and a separation method of laminate glass.

The invention provides a separation method of an adherend, which is a method of separating an adherend stuck by using an
10 adhesive, and comprises the steps of: air-tightly sealing the adherend together with a fluid being a gas at a normal temperature and normal pressure in a pressure resistant container, making the inside of the pressure resistant container in a high pressure state, and releasing the pressure of the inside of the pressure
15 resistant container.
